International e-Planning Workshop 2012: "Citizens, Cities and Technology"

April 23, 2012 (10h00 - 19h30)

Location: Faculty of Sciences, University of Lisbon – Campo Grande, Bloco c6 (C6 Building), 2nd floor, Room 56, Lisbon

The purpose of this Workshop is to showcase exciting and promising projects in the growing field of e-Planning, to take measure of the state of the art in e-Planning and a glimpse of what's ahead, and finally to promote the exchange of projects, knowledge and experiences between e-Planners from several countries.

As always, inspired by MIT's Media Lab motto – "Publish or Perish", but also "Demo or Die" –, this e-Planning Workshop intends to go beyond the traditional model of communication, creating both a space and an opportunity to see and reflect the potential of tools, systems and approaches that we call "e-planning". This will be the place and the time where communities, institutions and researchers meet to exchange, on an international level, their needs and their views on projects and approaches that are still under development.

Programme

Part I: Posters and Demonstrations

10h00 – registration

10h30 - 12h30

- Interactive project demonstrations and Poster session

- *Mutual campus : urban sustainable street furniture integrating mobility information of the campus Descartes*
Roshanak Naderi, Master student, IFU, U. Paris
- *Mutual campus : benchmark of similar projects*
Ulysse Lassaube, Master student, IFU, U. Paris
- *BeeCitiz, a citizen's tool to solve the public road network's issues : the experience of a participatory map offered by Paris' municipality.*
The inhabitants don't take a large part in the management of the public space. A private software- BeeCitiz – is used by Paris cityhall. This case study will be presented focused on the analysis of the role played by the different actors: the inhabitants, the municipality, the designers.
Aurore Bertrand et Yuan yuan Wang, Master students, IFU, U. Paris
