

BUILDING THE FUTURE IS A COLLABORATIVE PROCESS.

Open Source Geospatial Foundation, or OSGeo — a not-for-profit organization is dedicated to the collaborative development of open geospatial technologies and data. As the leading supporter of such technologies, we provide financial, organizational and legal support to the open source geospatial community. In addition, OSGeo acts as an independent legal entity to which community members can contribute code, funding and other resources. To find out more, visit www.osgeo.org because our future knows no limits when we work together.
