

Join us to build the future of GI!

Geospatial information (GI) in Europe is fragmented. We are building a system to unify it FOR ALL. We enable start-ups, researchers, businesses and administrators to use GI in innovative ways. We open data access in the EU and work to change people's lives. **Tell us about your needs, participate in various activities, be the first to embrace this new opportunity and win 1500, 1000 or 500 EUR in cash prizes!**

Are you an app developer, researcher, businessman, programmer, open data supporter, or just need a GI tool for your hobby? Then join us, contribute to a major innovation in Europe! **Your opinions will make the difference!**

ENERGIC-OD transforms GI everywhere: in smart cities, health services, commerce, urban planning, agriculture, sports, architecture, cartography, weather forecasting, etc. It connects all types and sources of GI information together, and **offers one-point access and powerful interface that can be used by anyone.**
